Software Developer in Test – Take Home Assignment

Atlanta, GA | www.ware2go.com

W2G

A UPS Company ™

Assignment

Thank you for applying for the SDET position at ware2go. We would like to advance to the next step of the process and would like for you to complete the attached Coding Assignment to continue your consideration for this role. Please complete and send us the link to the Github repository for the project at your convenience.

Using The movie database API ([Click Here for API Documents](#)) please create a GitHub Repository that will answer the following requirements in JavaScript:

1. A function that accepts a parameter of one of your favorite actors' names and returns a list of their movies.
2. Using the above function, create another function that will accept two actors and return which one of them played in more movies.
3. Add a short readme explaining how to run your program or a tester file.

- command-line answers are fine, no need for UI
- alternatively, it is possible to also submit a postman collection with pre-request/ test scripts that can be executed as a flow via the runner (but a code solution is preferred)

If you have any questions or clarifications, please feel free to reach out to Kayla Delcoure at kayla.d@ware2go.co

Thank you!
